

ProHost

ENJOY PEACE OF MIND
WITH HANDS-OFF HOSTING

Maintenance Free

- ▶ One less server to maintain, administer, and update
- ▶ Always up-to-date with the latest ProTrack Software 24/7
- ▶ "Always On" system monitoring, provided by Myers ControlRoom

Peace of Mind

- ▶ Built upon the latest Amazon Web Services technology
- ▶ The Myers agent runs within your network and facilitates all external communications
- ▶ Always backed up and always protected in the case of an emergency

Unlimited Scalability

- ▶ Virtual hardware is tailored to your station's needs
- ▶ Memory and processing power can be dynamically changed based on your system's growth
- ▶ Never run out of disk space again

Cost Effective

- ▶ Low, predictable, year-over-year operational cost
- ▶ No server, no maintenance, no surprises
- ▶ Free your technical resources up in order to concentrate on your station's mission

ProHost

WHAT IT IS AND HOW DOES IT WORK?

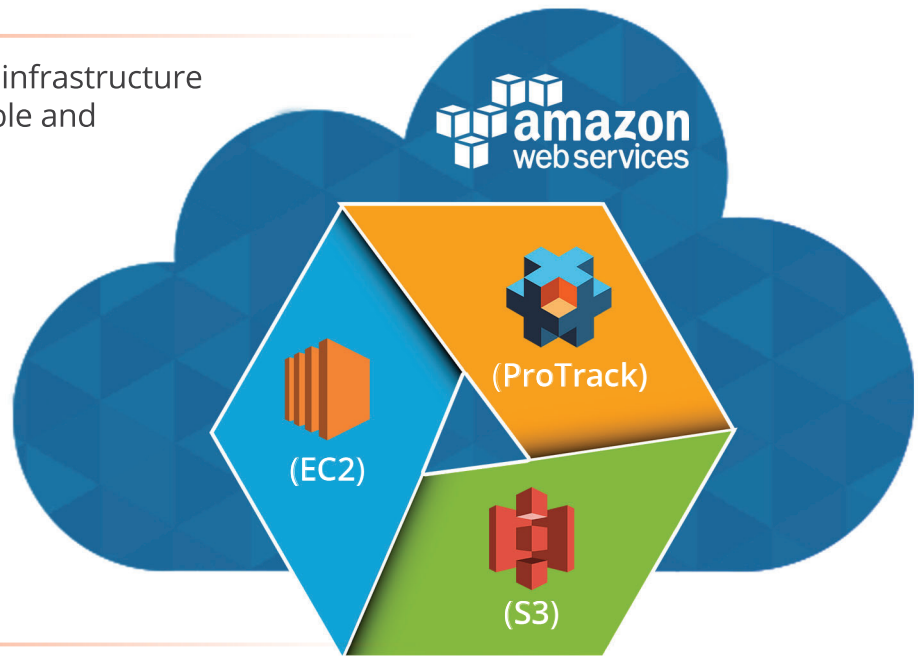

ProHost is a dedicated, highly secure, cloud-based ProTrack solution that gives you all of the benefits of cloud based software along with the convenience and security of having ProTrack within your own network. Utilizing ProHost allows you to eliminate the need to purchase or maintain expensive hardware.

The ProHost configuration is set up and managed by the Myers implementation team, saving you valuable time. It is designed to seamlessly manage all ProTrack operations in the cloud, giving users peace of mind at an enterprise level.

Two components within ProHost's AWS infrastructure are key in providing users a highly reliable and seamless ProHost experience:

1. **Elastic Cloud Compute (EC2)** - ProTrack runs on an EC2 instance dedicated to your site, built to suit your specific needs and expandable to accommodate your future growth.
2. **Simple Storage Service (S3)** - All data is backed up to S3 nightly. In the case of an unforeseen emergency, your data is always backed up and ready for fast and easy restoration.

WHAT IS THE MYERS EDGE DEVICE? The Myers Edge device is the only hardware component of ProHost. It is a small device (similar in size to an external hard drive) that is preconfigured by Myers before being shipped to your site. It houses the Myers Agent (see below), allowing for communication to and from your cloud ProTrack instance. Your Myers Edge Device will be customized to fit your individual networking needs and are typically ordered with either two or three network interface cards which allow communication from ProHost to multiple private network segments that do not have internet access. Myers personnel will work with your onsite networking staff to set-up the device and label each network port such that when it arrives, all that is needed is to connect it to power and insert network cables according to the port labels.

WHAT IS THE MYERS AGENT? The Myers agent is the magic behind ProHost 2.0. It is a lightweight service that runs on your Myers Edge device and brokers communications between your cloud instance of ProTrack and the rest of your local resources and systems. It monitors requests both from ProTrack and from other systems on your network and passes the messages back and forth as needed, just as if ProTrack were still on dedicated hardware within your network.

Getting started with ProHost is a turnkey process and one that our service and support teams are happy to guide you through. Call us today to start reaping the benefits of hosting ProTrack in the cloud.
